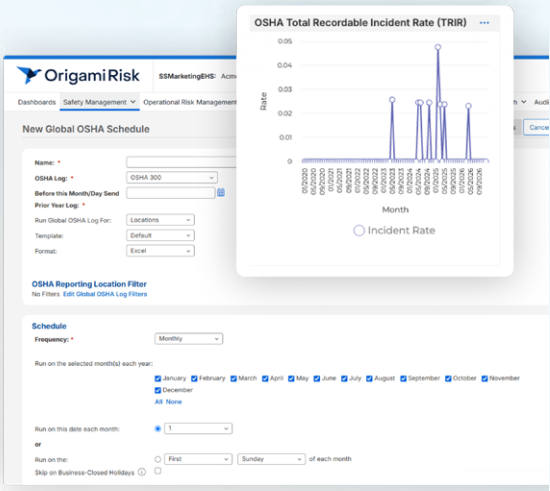
OSHA ready every day, not just in February



Capture, validate, and report injury data on one connected platform.

OSHA reporting breaks down upstream, when injury details are incomplete or split between safety and claims systems. Origami Risk captures complete data at the first report, generates OSHA logs and submission-ready files from one connected record, and turns recordkeeping into insight that drives prevention. The result is logs you can trust, less year-end reconciliation, and the insights to reduce recordables.

Report the right details the first time, from anywhere

Complete data at incident intake so that you have the information you need. Configurable forms guide reporters to provide the details needed to determine recordability, lost days, and restricted days.

- Report incidents through web portal and Origami Mobile, including offline mode.
- Autofill employee and location data to speed intake and reduce errors.
- Collect the details that determine recordability, so nothing is missed and every incident is classified correctly on the OSHA logs.
- Attach photos and documents directly to the injury record.
- Restrict access to sensitive injury data with permission controls.

Produce accurate OSHA logs without the year-end scramble

Every establishment gets accurate, consistent reporting, whether you manage five sites or 500. Safety staff spend log season reviewing results instead of rebuilding them.

- Generate and schedule logs by reporting establishment, location, or territory.
- Manage hours worked and employee counts in the system, by location.
- Calculate lost and restricted days directly from lost time records.
- Export 300A, 300/301 case data in OSHA-compatible format for submission via OSHA's Injury Tracking Application (ITA).
- Receive ongoing updates that keep OSHA logic aligned with agency requirements..

Eliminate manual reconciliation between safety and claims data

Safety and risk teams stop trading spreadsheets and start working from the same injury record.

- Draw OSHA logs from incident and workers' compensation claim data on one platform.
- Import HR, payroll, and TPA data on demand or on a schedule.
- Report consistently whether an injury starts as an incident or claim.
- Keep injury details consistent from first report through claim closure.

Use OSHA data to find root causes and reduce recordables

OSHA rates only matter if they change behavior. Origami Risk puts the numbers next to the investigations, actions, and audits that move them.

- Track TRIR, DART, lost time case rate, and severity by site.
- Run investigations with structured RCA methods, including 5 Whys and Fishbone.
- Drive corrective actions with automated escalation until they close.
- Audit against OSHA General Industry and Construction checklists or build your own.
- Connect injuries to claims cost to make the case for prevention investment.

Built for high-scrutiny industries.

Manufacturing: multisite establishments. Construction: transient crews and job sites. Transportation: distributed and mobile workforces. Government: State Plan requirements. Retail: high store counts. One platform handles the reporting demands that differ by industry.

35% TRIR REDUCTION.

Griffith Foods reduced its TRIR by 35% from FY2022 to FY2023 using Origami Risk. Read the case study.
