ORIGAMI RISK

## Be prepared: Stay on top of varying vaccination booster requirements, timelines, and reminders.

Automate logistics around tracking and notifying employees of upcoming COVID-19 vaccination boosters with Vaccine Booster Tracking. As employees begin approaching their recommended booster dates on staggered timelines, and with recommendations varying between vaccine manufacturers, simplify data intake and easily identify employees that will soon be due for a booster, those who are overdue for one, and more.

Features:

- Track employee booster shot status (i.e., "missing booster," "vaccinated with booster," "waiting period") and identify whether an employee is fully vaccinated and eligible for a future booster shot or those who overdue for a booster

- Allow employees ease of entry to the system via web or mobile portals to submit proof of vaccination booster

- Easily build custom workflows to remind employees via email and/or text of upcoming booster shots, to submit proof of booster, and more while providing direct access to the system

Benefits:

- Leverage easy-to-use reporting tools and automation without the need to track employee vaccination status manually or with spreadsheets

- Utilize notifications and a centralized system to manage employee booster reporting and communications

- Gain greater visibility into vaccination status by location and easily identify locations with employee populations at risk of lapsed booster shots, groups now eligible for booster, and more

Be prepared: Manage and automate logistics around weekly employee COVID-19 testing.

Origami's COVID Test Tracking solution automates and simplifies the logistical burden of managing and tracking weekly testing for employees that have opted to waive the COVID vaccine or employees that may have been exposed to an infected person. Easily identify individuals that need to undergo weekly testing, or drop them into a new workflow if they opt to receive the vaccine or test positive.

Features:

- Use web or mobile forms to track negative or positive COVID-19 tests for unvaccinated or exposed employees

- Track test details, including date and time, test type, results, where the test was administered, and proof of test

- Automate various workflows depending on whether an employee has an upcoming test, is overdue for a test, or tests positive and needs to meet additional requirements before returning to work

Benefits:

- Stay in compliance with rapidly changing state and federal vaccination mandates and employee testing requirements

- Simplify reporting with integrated dashboards and reporting and track key metrics like percentage of employees requiring testing, number of employees out of compliance, and more

- Modify timelines, requirements, and more to the testing workflows to fit in line with your organization's specific COVID-19 policies
