End-to-end risk visibility for transportation leaders

Risk professionals in the transportation sector face a complex mix of incidents, claims, and compliance requirements while navigating siloed systems and tight margins. Origami Risk delivers comprehensive software solutions on a single, configurable platform that connects incident, claim, safety, and compliance data with information from across your technology ecosystem — including TMS, telematics, LMS, HRIS, and more.

Whether you manage freight, marine, transit, or air operation risk, our solutions are purpose built to help you reduce costs, streamline operations, and respond faster with full visibility into what's happening, where, and why.

"With Origami Risk, our data came to life. We're able to see, interpret, analyze, and act upon safety concerns like never before."

Jeff Brown

SENIOR MANAGER OF HSSE | Fenix Marine Services

INCIDENTS
Streamline reporting and strengthen insight

Capture every incident across terminals, ports, and routes with flexible tools that ensure complete visibility and drive corrective action.

- Improve reporting speed and accuracy by enabling dispatchers, service center representatives, and employees or contractors to submit incidents in real time — even anonymously, when needed — via web portal and mobile app.

- Reduce delays, non-compliance, and costly penalties through configurable workflows that automatically trigger alerts, investigations, and required regulatory reporting steps.

- Preserve critical context from the start with intake options that allow photos, videos, and supporting documents to be attached to incident records — including content pulled in through integrations with other systems.

- Strengthen operational insight by capturing all types of incidents — such as property damage, cargo issues, injuries, and near misses — and connecting them to related claims or safety reviews.

- Spot trends earlier and support better decision-making with integrated dashboards and reports.

CLAIMS
Collaborate and reduce costs

Manage cargo, auto, liability, and injury claims from intake through resolution with a complete view and automation across internal teams and TPAs.

- Improve data quality and eliminate silos by aggregating claim information from TPAs, carriers, and in-house records into a single source of truth.

- Strengthen documentation and audit trails by linking claims directly to incidents, corrective actions, litigation, and policy data for end-to-end insight; run subrogation workflows for direct recovery actions.

- Reduce manual-entry errors and speed up cycle time with automated intake, triage, and routing driven by configurable business rules.

- Track cargo-specific issues resulting in OSD, including loss, spoilage, or delay, to support faster resolution and recovery.

- Support financial forecasting accuracy and vendor performance review by monitoring reserves, legal costs, and payments in real time.

- Maintain compliance with OSHA, DOT, CMS, and jurisdictional FROI/SROI requirements through automated reporting and validation tools.

SAFETY

Build a culture of accountability

Move from reactive safety management to proactive prevention by connecting audit, inspection, training, and root cause analysis (RCA) activities across your operations.

- Identify risks earlier and improve safety awareness by providing insight into near misses, open corrective actions, and location-specific risk indicators.

- Eliminate manual tracking and reduce spreadsheet dependency by digitizing safety meetings, audits, and inspections for easier scheduling, documentation, and follow-up.

- Reduce repeat incidents by using root cause analysis tools and corrective action tracking.

- Stay on top of training and qualification requirements by centralizing tracking of training completion, certification records, and compliance deadlines — with automated reminders replacing paper- or spreadsheet-based processes.

- Streamline efforts with dashboards and reports that provide teams with shared access to tasks, metrics, and progress.

INTEGRATIONS

Centralize and connect for complete visibility

Unify data from across your operational ecosystem into one platform for accurate reporting and faster action.

- Create a single, trusted source of truth by seamlessly integrating telematics, dashcams, bills of lading (BOLs), accounts payable, and data from TMS and other systems.

- Give teams a holistic view of all risk and safety data with dashboards that combine information by location, operator, or asset — including operator or driver scorecards when applicable.

- Reduce reporting effort and improve accuracy by combining necessary information and automatically generating OSHA, DOT, and internal reports that are pre-validated and export-ready for auditors or leadership.

- Support data access to all relevant information for all stakeholders — from claims managers to field safety teams – with role-based permissions and intuitive interfaces.

About Origami Risk

Origami Risk empowers leaders in insurance, risk, and safety with a purpose-built, cloud-native platform that optimizes workflows for better data, better insights, and better collaboration. Through highly configurable solutions integrated on a single platform, Origami Risk supports the management of the full lifecycle of risk, from prevention to recovery — helping the experts reduce harm and loss, and respond more rapidly and effectively when it happens. Grounded in continuous innovation and a foundational focus on client success, Origami Risk is trusted by leading organizations to enable greater resilience as they build for the future.
