

Origami Risk Workflow

Orchestrate work
across your ecosystem

Connecting tools, data, and systems is only the starting point. Real value comes from turning business events, data, approvals, and downstream actions into structured, scalable processes.

Origami Risk Workflow gives teams a no-code way to design and run business processes directly inside the platform. Instead of relying on scripts, tickets, or disconnected third-party tools, teams can orchestrate visible, manageable workflows across Origami Risk, connected partners, and AI-supported actions in one place.

The screenshot displays the Origami Risk Workflow Builder interface. The main workspace shows a workflow diagram for 'Create Claim Task' (3R). The workflow starts with a 'Start' node (Origami Risk - General) leading to a 'Task Type' node (Branch - If Condition is Met). This node branches into two paths: 'Lawsuit Field' and 'Else'. The 'Lawsuit Field' path leads to a 'Summarize Claim' node (Origami Risk - AI - Summarize) and then to a 'Create Claim Task' node (Origami Risk - Claims). The 'Else' path leads to a placeholder box. A 'Create Workflow' modal is open on the right, with fields for 'Workflow Name', 'Description', and 'Category'. The 'Category' dropdown is set to 'Select'. Below the modal, there are sections for 'Coverages' and 'Policies', and a '+ Add "Claims"...' button. The interface includes a sidebar with navigation options like 'Account Overview', 'People and Access', 'Settings', 'Workflows', 'Forms', 'Page Builder', 'Activity Logs', 'Marketplace', 'Client Portal', and 'Rating Plans'. The top right corner has buttons for 'Run Test', 'Filter Builder', and 'Data Tools'. The bottom left corner has a 'Test Runs' button and a 'Test Configuration' button.

Why Origami Risk Workflow matters

- Build and adapt workflows without heavy technical lift using no-code design.
- Keep process logic close to your users, data, and business events.
- Coordinate actions across Origami Risk, partners, and AI in a single workflow.
- Maintain control with embedded approvals and human-in-the-loop oversight.
- Monitor, troubleshoot, and continuously improve workflows over time.

Many workflow tools sit outside the platform, adding yet another layer to manage. Origami Workflow operates natively inside Origami Risk, giving teams direct control over processes with greater visibility and less reliance on external middleware.

What you can do with Workflow

- Build workflows visually.
- Trigger actions from business events, schedules, emails, and webhooks.
- Coordinate steps across Origami, partners, and AI.
- Add approvals and review points.
- Monitor execution and resolve issues faster.
- Optimize repeatable processes over time.
