

Prevent incidents. Reduce risk. Drive action.

Proactive safety on one connected,
AI-enabled platform.

Safety teams don't struggle to collect data.
They struggle to act on it.

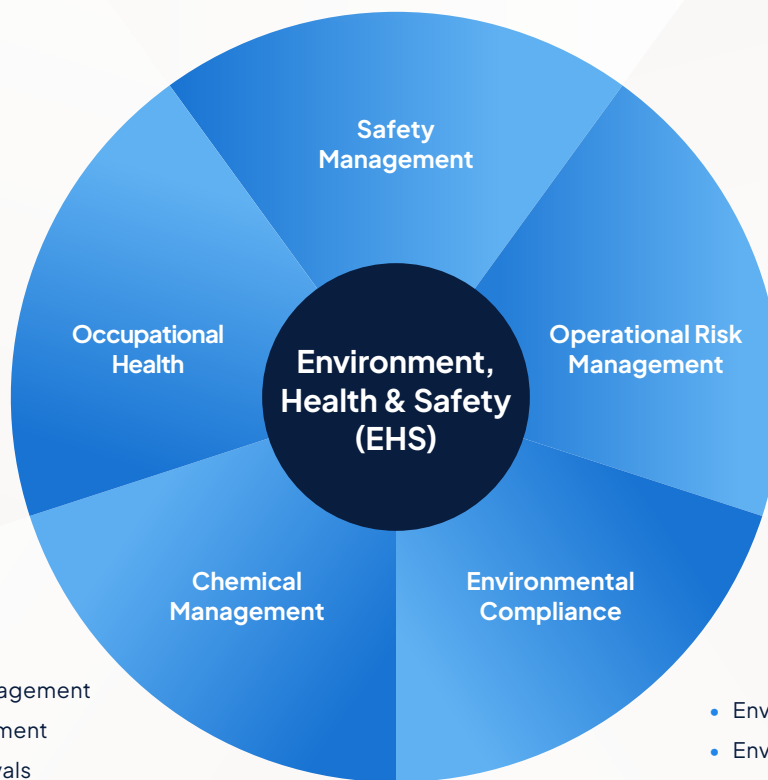

By connecting safety, risk, claims, and cost data on a single platform with intelligent workflows and AI-driven insights, organizations gain the visibility needed to act. That means stronger accountability, executive buy-in, and more proactive investment in prevention initiatives that keep workers safe.

Move from incident reporting to incident prevention

Increase reporting and improve data quality

Enable anyone anywhere to quickly report incidents, hazards, and observations through web app, portal, or mobile, helping your teams capture more complete, actionable data from the field in real time.

Prioritize risk and drive faster action

Centralize safety and operational data in one platform to gain visibility into risk across sites and the enterprise. Use configurable dashboards and reporting to intelligently identify trends, prioritize corrective actions, and give both site leaders and executives the insight needed to make faster, more informed decisions.

Prove business impact to increase investment

Link safety performance to impact on business outcomes, including claims and insurance costs and enterprise risk. Leverage dashboards and reporting to show results, strengthening executive buy-in for proactive resource investment that helps keep your workers safe.

Configurable tools built for real safety teams

Adapt your safety processes and activities (including incident reporting forms; audits and inspections; and investigations and root cause analysis) to fit how your organization actually works, without costly, time-consuming custom development.

Increase cross-team collaboration

Break down silos across safety, claims, operations, and risk management to improve visibility, streamline collaboration, and support more informed decision-making across the organization.

Drive accountability and follow-through

Automate notifications, escalations, and corrective action workflows to help ensure nothing falls through the cracks. Make sure risks are addressed, actions are completed, and safety programs continue moving forward.

Simplify work for frontline and safety teams

Reduce administrative friction with configurable forms, guided workflows, offline mobile access, and intelligent automation. Capture the right information from the right people at the right time — from anywhere — so teams can respond faster and focus more on prevention.
