

Streamline incident and event collection, processing, and analysis

From initial collection of incident and event details to analysis of the effectiveness of change management initiatives, Origami Risk transforms the way you report, track, and respond to incidents. Capturing information on incidents and events as soon as they occur improves the quality of data submitted, and real-time tracking and documentation enables transparency that can help identify actions required to prevent recurrence.

Simplify reporting and improve data quality

Report accidents, injuries, and near misses quickly and accurately, regardless of where they occur.

- Secure anonymous reporting for all users and additional tools for authorized users
- Flexible intake methods include a secure online portal, mobile app or QR code, and an optional anonymous collection portal for non-Origami Risk users
- Users can easily upload supporting documents, photos, and videos, ensuring comprehensive detail from the moment of incident entry
- Configurable incident forms include elements such as required fields, drop-down lists, and dynamic field population
- Integrate with third-party systems (e.g., HR, accounting and payroll solutions) to reduce data entry requirements

Automated workflows and intuitive dashboards

Reduce administrative overhead and keep the process moving with automation of incident-related workflows and role-specific dashboards.

- Incident entry or changes to specific fields can automatically alert designated stakeholders, assign an investigation, and — based on root cause analysis outcomes — automatically assign corrective actions
- Request additional information via grant access or email/text
- Automatically report recordable cases to OSHA
- Utilize role-specific dashboards for items such as the due date of corrective actions, risk assessment assignments, or for a high-level view of all completed, in-progress, or past-due reviews and investigations

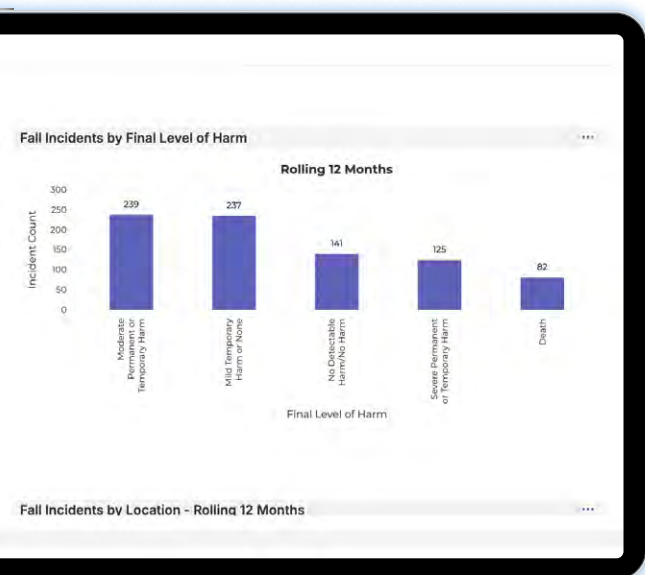

Data analysis to prevent future incidents

Origami Risk's analytics tools enable better identification of root causes, guiding insight-driven action to better mitigate future incidents.

- With incident data centralized in one place (along with all policies, claims, locations, assets, personnel, schedules, loss control surveys, and more), users have multiple options for analyzing incident data with automated reports and customized dashboards, or scoring incidents via audits
- Spot trends and view the effects of corrective actions at specific locations or compare across the enterprise

An innovative platform for continuous improvement

Origami Risk's cloud-native, multi-tenant SaaS platform ensures all clients benefit from the latest technology. Regular product releases and API flexibility foster innovation, while our robust vendor ecosystem expands capabilities. Self-service configuration tools empower users and reduce IT dependencies, promoting agility in your operations.

“Using Origami Risk, we are now able to see the detail around the injuries and exposures and get visibility into near misses. With all of the incident data reported, we can really start to address things in a proactive way instead of always being reactive.”

JEFFERY R. STOLLE
Risk Management, Dole

About Origami Risk

Origami Risk empowers leaders in insurance, risk, and safety with a purpose-built, cloud-native platform that optimizes workflows for better data, better insights, and better collaboration. Through highly configurable solutions integrated on a single platform, Origami Risk supports the management of the full lifecycle of risk, from prevention to recovery — helping the experts reduce harm and loss, and respond more rapidly and effectively when it happens. Grounded in continuous innovation and a foundational focus on client success, Origami Risk is trusted by leading organizations to enable greater resilience as they build for the future.
