

A faster, more predictable path to RMIS value

Get the foundational risk management capabilities your team needs — with a proven, packaged approach designed to get most organizations live in 4–8 weeks.

When spreadsheets, disconnected systems, or basic tools no longer keep up with your risk program, moving to a Risk Management Information System (RMIS) is an important next step. But not every organization needs — or is currently ready for — a highly-tailored implementation.

RMIS GO provides a different path. Built on the Origami Risk platform, it combines proven RMIS capabilities with preconfigured forms, workflows, reports, dashboards, and security roles. A clearly defined scope reduces implementation complexity, helping you get to value faster with greater predictability around timeline and investment.

Why RMIS GO?

4–8 weeks to go-live

Start with a proven configuration and guided implementation approach designed to get most organizations up and running in weeks.

Predictable scope and investment

A packaged solution and clearly defined implementation scope provide greater clarity from the start around requirements, timeline, and cost.

Proven RMIS foundation

Get the capabilities — incident and claims management, policies, exposures, reporting, and workflow — that address your foundational risk and insurance program needs, pre-configured around established practices.

Room to evolve

RMIS GO is built on the Origami Risk platform. As needs change over time, you have the flexibility to add capabilities without starting over.

Is RMIS GO right for my organization?

RMIS GO is designed for organizations that have **outgrown manual or disconnected methods of managing risk and insurance**, but don't require a RMIS designed extensively around unique processes or complex requirements.

RMIS GO is a good fit if you:

- Need a more consistent and comprehensive way to manage incidents, claims, policies, exposures, and risk information.
- Want to replace spreadsheets, email, or disconnected tools with a centralized system and structured processes.
- Have well-defined, relatively standard risk and claims management requirements that don't require extensive system tailoring.
- Want to improve reporting, visibility, and workflow automation without taking on unnecessary implementation complexity.
- Place a high priority on getting live quickly and having greater predictability around implementation scope and investment.

RMIS GO prioritizes proven configuration, speed, and predictability over extensive upfront tailoring — giving organizations with more straightforward requirements a faster way to put a strong RMIS foundation in place.

Proven capabilities for foundational RMIS needs

RMIS GO isn't simply a smaller collection of software features. Its packaged capabilities are designed for the connected processes that form the foundation of many risk and insurance programs — from capturing an incident through managing the resulting claim, understanding the policy and exposure behind it, and turning that information into action.

Incident & Event Management Capture consistent information from the start.	Claims Management Manage claims, financials, and related information together.	Policies & Programs Bring greater structure and visibility to your insurance program.	Exposure Tracking Maintain a more complete view of what you're protecting.	Reporting, Dashboards & Workflow Turn connected information into action.
--	--	---	--	--

A defined implementation built for speed

The same packaged approach that simplifies your technology decision also simplifies implementation.

Rather than beginning with an open-ended configuration process, RMIS GO follows a defined implementation path built around proven configuration standards, focused discovery, clear responsibilities, and user training.*

Weeks 1–2	Weeks 2–4	Weeks 4–6	Weeks 6–8
Kickoff & Discovery Confirm priorities, data needs, and light configuration requirements with your Origami Risk project team.	Standard Configuration Deploy proven RMIS configuration within a clearly defined scope.	Data Prep & Testing Prepare and load data, review the system, and complete testing and approvals.	Training & Go-Live Train users, complete final testing, and move into production with Go-Live support.

* Most organizations are up and running in 4–8 weeks. Actual timing depends on data readiness, configuration requirements, and the pace of client review and approvals.

A right-sized RMIS, free of unnecessary complexity

To match the speed, simplicity, and predictability you need today, RMIS GO is implemented as a set package. You get proven RMIS capabilities, connected data, streamlined workflows, and reporting on the Origami Risk platform — without taking on implementation complexity you don't need.

And if your requirements become more complex over time, you can expand beyond RMIS GO with additional Origami Risk capabilities while keeping your existing platform and data foundation in place.

Get the RMIS foundation you need today — without taking on the cost, complexity, or implementation burden you don't.

About Origami Risk

Origami Risk empowers leaders in insurance, risk, and safety with a purpose-built, cloud-native platform that optimizes workflows for better data, better insights, and better collaboration. Through highly configurable solutions integrated on a single platform, Origami Risk supports the management of the full lifecycle of risk, from prevention to recovery — helping the experts reduce harm and loss, and respond more rapidly and effectively when it happens. Grounded in continuous innovation and a foundational focus on client success, Origami Risk is trusted by leading organizations to enable greater resilience as they build for the future.
