# Manage liability exposure. Protect operations. Control the cost of risk.

Origami Risk

Third-party logistics (3PL) providers face growing pressure to manage risk across networks of carriers, warehouses, and distribution partners. From cargo damage and transportation accidents to third-party liability, one incident can trigger costly claims, disruption, and reputational damage.

Origami Risk connects claims, incidents, insurance, safety, and third-party risk data in one configurable, cloud-native platform spanning RMIS, EHS, and GRC.

## Gain control of claims across your logistics network

**Resolve claims more efficiently and minimize financial exposure.**

- Centralize cargo, auto liability, general liability, property damage, and workers' compensation claims in one system.
- Streamline claims workflows, documentation, and communication with insurers, carriers, and third-party administrators (TPAs).
- Track claims status, reserves, litigation, and recoveries to improve financial oversight and resolution.
- Analyze loss trends across locations, operations, and partners to identify recurring issues and cost-reduction opportunities.

## Capture critical incident information when it matters most

**Improve response times, preserve documentation, and strengthen claims defensibility.**

- Standardize reporting of transportation accidents, cargo damage, warehouse incidents, and other events through configurable portals and mobile tools.
- Centralize incident details, documents, and investigation findings into a reliable record of events.
- Automate notifications, assignments, and follow-ups to speed up response and improve accountability.
- Connect incident data with claims and safety information to uncover root causes and prevent repeat losses.

## Strengthen oversight of third-party carriers and partners

**Make informed decisions and reduce exposure across your extended network.**

- Centralize risk assessments, documentation, and performance data for contracted carriers and logistics partners.
- Track insurance certificates, coverage details, and supporting records to spot potential gaps.
- Standardize assessment and review workflows for consistent partner oversight.
- Document assessments and follow-up actions to demonstrate diligence and accountability.

## Protect your business with better insurance visibility

**Identify coverage gaps and make informed risk financing decisions.**

- Centralize policies, coverage limits, endorsements, and renewals in one system of record.
- Connect policy, claims, and exposure data to surface coverage gaps and financial risk.
- Streamline renewals and broker collaboration with structured workflows and accessible program information.
- Use historical losses and exposure insights to inform insurance negotiations.
- Centralize driver qualification files for your drivers, track license, medical certification, and motor vehicle record (MVR) requirements, and get alerts before documents expire to stay ready for Department of Transportation (DOT) audits.

## Prevent incidents before they become costly claims

**Strengthen safety practices across transportation and warehouse operations.**

- Standardize inspections, audits, and corrective actions to address hazards consistently across facilities.
- Connect safety and incident data to identify trends in vehicle accidents, warehouse injuries, and operational losses.
- Integrate telematics, dashcam, and other operational technology data to improve safety visibility.
- Monitor safety initiatives to reduce recurring incidents and build a stronger safety culture.

## Understand and reduce your total cost of risk

**Turn fragmented risk data into actionable financial insights.**

- Consolidate claims, insurance, and exposure data for a clearer view of total cost of risk (TCOR).
- Identify loss drivers across facilities, business units, and transportation operations.
- Monitor claims costs, insurance expenses, and risk metrics through configurable dashboards.
- Use historical trends and reporting to prioritize risk reduction investments and strategic decisions.

## Built for the complexity of 3PL.
