Origami Risk

Enterprise risk management, up and running in five weeks

Get the core enterprise risk management capabilities your team needs, with a proven, packaged approach and a scope you can plan around from day one.

When spreadsheets, email, and point-in-time assessments can no longer keep up with your risk program, moving to a dedicated Enterprise Risk Management (ERM) system is an important next step. But not every organization needs, or is ready for, a highly tailored implementation.

ERM Go provides a different path. Built on the Origami Risk platform, it combines proven ERM capabilities with a preconfigured risk register, scoring, controls, action plans, dashboards, and security roles. A clearly defined scope reduces implementation complexity, helping you get to value faster with greater predictability around timeline and investment.

Why ERM Go?

Five weeks to go-live

Start with a proven configuration and a guided, training-led implementation designed to get your ERM program up and running in weeks, not months.

Predictable scope and investment

A packaged solution and clearly defined implementation scope provide clarity from the start around requirements, timeline, and cost.

Proven ERM foundation

Get the capabilities that address your core ERM needs (risk register, assessment and scoring, controls, and action plans) preconfigured around established best practices.

Leadership-ready from day one

Consistent scoring and executive dashboards give you risk information that holds up when leadership asks how a risk was rated and where it stands.

Is ERM Go right for my organization?

ERM Go is designed for organizations that have **outgrown spreadsheets and manual methods of managing enterprise risk, but don't require an ERM program designed extensively around unique methodologies or complex requirements.**

ERM Go is a good fit if you:

- Need a more consistent, centralized way to identify, assess, and track enterprise risks, controls, and action plans.
- Want to replace spreadsheets, email, and disconnected files with a single system and structured processes.
- Use, or are ready to adopt, a standard likelihood and impact approach to scoring risk.
- Want clearer visibility and reporting for leadership without taking on unnecessary implementation complexity.
- Place a high priority on getting live quickly and having greater predictability around implementation scope and investment.

ERM Go prioritizes proven configuration, speed, and predictability over extensive upfront tailoring, giving organizations with more straightforward requirements a faster way to put a strong ERM foundation in place.

The essentials of a working ERM program

Enterprise risk programs stall when risk data lives in disconnected files and every assessment cycle starts from scratch. ERM Go gives you the connected essentials of a working program, from identifying and scoring a risk to mapping the controls that mitigate it, acting on what you find, and reporting on it with confidence.

Risk Register
Bring every enterprise risk into one consistent view.

Assessment & Scoring
Score risks consistently with a proven methodology.

Controls
Connect controls to the risks they're meant to address.

Risk Action Plans
Assign and track the work that reduces risk.

Dashboards & Reporting
Give leadership and risk owners a clear picture.

A defined implementation built for speed

The same packaged approach that simplifies your technology decision also simplifies implementation.

Rather than beginning with an open-ended configuration process, ERM Go follows a defined, training-led implementation path built around proven configuration standards, your existing risk data, clear responsibilities, and administrator training.*

Week 1	Weeks 2–3	Week 4	Week 5
Kickoff & Data	**Configuration & Training**	**Validation**	**Go-Live**
Enable your environment, confirm the standard setup, and send your current risk register using our template.	Import your risk register and train your administrator on workflows, forms, roles, dashboards, and reports.	Review the solution, complete data import training, and validate your data.	Sign off, go live, and transition to ongoing Origami Risk support.

* The five-week timeline assumes your risk register is provided in week one and the standard configuration is accepted as delivered. Weekly check-ins are required to keep the project on track.

Connected to the rest of your risk program

ERM Go runs on the same Origami Risk platform as our RMIS and safety solutions. Enterprise risk can sit alongside insurable risk, claims, and safety data, so leadership gets one connected view of risk instead of separate spreadsheets and systems.

And as your program matures, you can add capabilities like AI Risk Explorer, Risk Assessment Intelligence, and Bowtie Modeling, or extend into compliance, audit, and business continuity, all without a new system or a data migration.

One platform for enterprise, insurable, and safety risk, starting with an ERM foundation you can have live in five weeks.

About Origami Risk

Origami Risk empowers leaders in insurance, risk, and safety with a purpose-built, cloud-native platform that optimizes workflows for better data, better insights, and better collaboration. Through highly configurable solutions integrated on a single platform, Origami Risk supports the management of the full lifecycle of risk, from prevention to recovery — helping the experts reduce harm and loss, and respond more rapidly and effectively when it happens. Grounded in continuous innovation and a foundational focus on client success, Origami Risk is trusted by leading organizations to enable greater resilience as they build for the future.
